This sequence represents the E. coli wild-type ompc protein. The coding sequence of the ompc gene was removed via PCR using primers TT7-TT10 (AAZ22893-Z22895) to produce a non-reverting deletion mutation. The mutant ompc gene (AAZ22886) was used in the production of a bacterium attenuated by a non-reverting mutation in each of the ompc gene; the arcc gene (AAZ22883, AAZ22884), and the ompr gene (AAZ22883, AAZ22888). The mutant bacteria provide immunogenic activity with reduced virulence and thus can be used as a vaccine for raising an immune response against a variety of bacteria in a mammalian host. Such vaccines can provide protection against e.g., E. coli (a cause of diarrhoea in humans), Salmonella typhimurium (the cause of salmonellosis in several animal species), S. typhi (the cause of human typhiod), S. enteritials (a cause of food poisoning in humans), S. choleraeauis (a cause of salmonellosis in pigs). S. dublin (a cause of both a systemic and diarrhoeal disease in cattle, especially of new-born calvee), Hemophilus influences (a cause of meningitis), Nelsseria gonorrhoea (a cause of gonorrhoeae), Yershila form cause of a spectrum of disease in humans ranging from grant (the cause of a spectrum of disease) in humans ranging from gastroenteeritis to fatal septicemnic disease), and infertility in cattle and a condition known as undulant fever in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8

porin antigen or a Bacteroides antigen as a target antigen. The antigen, a porin antigen or a Bacteroides antigen as a target antigen. The novel method of diagnosing UC in a subject suspected of having inflammatory lowel disease (IBD) comprises: (1) obtaining a sample from the subject; (2) contacting the sample with a histone HI-like antigen, or perinuclear anti-neutrophil cytophasmic antibody (pANCA) reactive fragment, to form a complex of the histone HI-like antigen, or the pANCA-reactive fragment, and antibody to the histone HI-like antigen, or the panceroid of the complex indicates that the subject has UC. The paNCA-reactive histone HI-like antigen, are useful in the antigen, porin antigen and Bacteroides antigen are useful in the diagnosis, prevention and treatment of UC. The methods can also be used for identifying agents useful for treating UC. The present sequence represents a E. coli outer membrane protein c precursor.

The method comprises reacting a patient sample with a portin antigen that is immunologically reactive with pANCA (perinuclear anti-neutrophil cytoplasmic antibodies) and detecting formation of a Ag-PANCA complex as indicative collits. The method is used to diagnose ulcerative collits, The method is used to diagnose represents a E. coli outer membrane protein c precursor.

interact with the gene products of (I). In addition the expression of used the purification of the proteins, the purified proteins can be used to generate reagents and screen small molecule libraries or other candidate compound libraries for compounds that can be further developed to yield novel antimicrobial compounds. In addition, nucleic acid probes complementary to (I) that are specific for particular species of microorganisms can be used to identify particular microorganism species in clinical specimens, therefore, providing a rapid and dependable microorganisms can be used to identify particular microorganism species in clinical specimens, therefore, providing a rapid and dependable infection. Also, antibodies generated against proteins translated from mRNA transcribed from proliferation-required sequences can also be used to specific microorganisms that produce such proteins in a species specific manner. AAH84371 and AAH84670 represent sequencing primers used in the isolation of E. coli growth and proliferation of E. coli growth and proliferation of E. coli growth and prosine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  outer membrane protein C; Crohn's disease; immunoglobulin A; IgA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                              The sequence represents the E. coli outer membrane protein C (OmpC) precursor. The invention relates to a novel method for diagnosing Crohn's disease in a subject. The method comprises detecting immunoslobulin (Ig)A OmpC antibodies in the subject, where the presence of the IgA anti-OmpC antibodies indicates that the subject has Crohn's disease. The proteins of the invention have antiinflammatory activity. The method of the invention is an immunological response elicitor. The method is useful for diagnosing Crohn's disease in a subject and administering an OmpC antigen is useful for inducing tolerance in a patient with Crohn's disease.

The invention provides a method for the diagnosis, prevention and treatment of ulcerative colitis (UC) using histone H1-like antigen, a portan artigen or a Bacteroldes antigen as a target antigen. The novel method of diagnosing UC in a subject suspected of having inflammatory bowel disease (IBD) comprises: (1) obtaining a sample from the subject; (2) contacting the sample with a histone H1-like antigen, or perinuclear anti-neutrophil cytoplasmic antigen, or the pANCA-reactive fragment, to complex of the histone H1-like antigen, or the pANCA-reactive fragment, and intubody to the histone H1-like antigen, and (3) detecting the presence or absence of the complex; where the presence of the complex indicates that the subject has UC. The pANCA-reactive histone H1-like antigen are useful in the antigen, porin antigen and bacteroldes antigen are useful in the antigen, porin antigen and treatment of UC. The methods can also be used for identifying agents useful for treating UC. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides a method for diagnosing ulcerative colitis in a subject suspected of having inflammatory bowel disease. The method comprises reacting a patient sample with a porin antigen that is immunologically reactive with pANCA (perinuclear anti-neutrophil cytoplasmic antibodies) and detecting formation of a Ag-PANCA complex as indicative of ulcerative colitis. The method is used to diagnose ulcerative colitis or susceptibility to it. The present sequence represents a E. coli outer membrane protein F precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Diagnosing ulcerative colitis or susceptibility, by detecting complex formation between microbial porin antigen and perinuclear anti-neutrophil cytoplasmic autoantibodies -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   284

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II): The and gene mapping, and in recombinant production of (II): The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques of restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or guantitating a polypeptide in tissue, as molecular weight markers and as (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. Contexpossible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and conditional contexpossible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and alagnostic amino acid sequences of the invention.

Contexpossible dor genetic disorders or other traits the printed contexposition of mutations and to produce other types of the invention.

Contexpossible dor genetic disorders or other traits to assess biodiversity and to produce other types of the invention.

Contexpossible dor genetic disorders or other traits form when the printed contexposition and and activity of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                 å
                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymersae chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in

diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags contentifying expressed genes. (I) is useful in gene therapy techniques contentifying expressed genes. (I) is useful for generating antibodies against it, detecting or quantifating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in capposition for genetic disorders or other trails to assess blodiversity and to produce other types of data and products dependent on DNA and canno acid sequences. ABG00010-ABG30377 represent novel human call sequence data for this patent did not appear in the printed considers in the printed security in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WEYNFQGNNSEGADAQTGNKTRLAFAGLKYADVGSFDYGRNYGVVYDALGYTDMLPEFGG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 WEYNFOGNNSEGADAQTGNKTRLAFAGLKYADVGSFDYGRNYGVVYDALGYTDMLPEFGG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents perchloroethylene (PCE) dehalogenase derived from Clostridium bifermentans DPH-1. PCE dehalogenase: (a) catalyses the dehalogenising reaction forming trichloroethylene from tetrachloroethylene; (b) is a dimer consisting of two subunits having a molecular weight of 35 kDa; (c) has an optimum pt of 7.5; (e) has enzymatic activity that is not affected by the addition of metalions, ethylene diamine tetraacetate, reduced nicotinamide adenine dinucleotide or vapanocobalami; and (f) has enzymatic activity which decomposing chlorinated aliphatic compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DT-AYSDDFFVGRVGGVATYRNSNFFGLVDGLNFAVQYLGKNERDT------ 165

Sequence 30, Application US/09041889
Patent No. 6033864
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Cohavy, Offer
TITLE OF INVENTION: Diagnosis, Prevention and Treatment of
TITLE OF INVENTION: Microbial UC pANCA antigens
NUMBER OF SEQUENCES: 4
CORRESPONDENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell & Flores LLP
STREET: 4370 La Jolla Village Drive, Suite 700
                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                 61 WEYNFQGNNSEGADAQTGNKTRLAFAGLKYADVGSFDYGRNYGVYYDALGYTDMLPEFGG 120

A; Nateriance insures. 325250
A; Molecule type: DNA
A; Recession: $25520
A; Molecule type: DNA
A; Realdues: 1-514 CSPS.
A; Realdues: 1-514 CSPS.
A; Realdues: 1-514 CSPS.
A; Note: this is one of the proteins induced when the E. coli cells are grown under ph compounds, and some other negatively charged solutes
C; Genetics:
A; Gene: phoE
C; Complex: homotrimer
C; Function:
A; Description: allows passive diffusion of small hydrophilic molecules with molecular
A; Note: induced under phosphate limitation
C; Superfamily: outer membrane protein; poin
C; Superfamily: outer membrane protein; poin
F; 1-21/Domain: signal sequence #status predicted <SP>F; 22-351/Product: outer membrane porin phoE #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Outer membrane porin phoE precursor - Salmonella typhimurium
NiAlternate names: phosphate-limitation-inducible outer membrane pore protein phoE
C;Specias Salmonella typhimurium
C;Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 20-Aug-1999

-!- FUNCTION: OMFF IS A PORIN THAT PASSIVE DIFFUSION PORES WHICH ALLOW SMALL MOLECULAR WEIGHT HYDROPHILIC MATERIALS ACROSS THE OUTER MEMBRANE. IT IS ALSO RECEPTOR FOR THE BACTERIOPHAGE T2.
-!- SUBUNIT: HOMOTRIMER.
-!- SUBCELLULAR LOCATION: Integral membrane protein. Outer membrane.
-!- SIMILARITY: BELONGS TO THE OMPC/PHOE FAMILY OF PORINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            X-RAY CRYSTALLOGRAPHY (3.0 ANGSTROMS) OF MUTANT ASP-141.
